

SECANTSTOR

Off Site.
Secure.
Peace of Mind.

How important is the data stored on your server to the viability of your company? Have you reviewed your backup process lately? Are you dependent on staff to take a tape off-site regularly to protect against fire and theft? Would you like peace of mind knowing your data is secure, replicated and recoverable?

Secant strongly encourages clients to protect their data through an on-site consistent, tested backup plan. To supplement this plan, SecantSTOR offers remote backup technology that ensures companies of all sizes will have their data in the event of a disaster. SecantSTOR provides protection that no company should be without.

Regular Internet Connection
Transmit and recover files over your internet connection with an easy-to-use web interface.

Automatic Backups
Once your backup routine is created, daily off-site copies of your critical data are made without any user intervention.

Automatic Notification
Successful backup, failed backup, even missed backup reports are sent to your email account automatically.

Security and Efficiency
Compression and encryption are utilized to protect your sensitive data meeting the requirements of HIPPA and Sarbanes Oxley.

Microsoft Exchange
With our advanced Microsoft Exchange plug-in you can backup your Microsoft Exchange server reliably, automatically and without taking it offline.

Database Server Backup
Our advanced services allow you to backup your MS SQL, My SQL, as well as Oracle and Lotus/Domino notes databases.

Multiple Platform Support
Backup data from Windows, Mac OS X, NetWare, Unix, and Linux.

Data Retention
Allow users to recover previous versions of a file or even deleted files for a predetermined period of time.
